Featured index

STOXX has introduced the iSTOXX® USD Across-the-Curve Credit Spread Index (AXI) and the iSTOXX® USD Financial Conditions Credit Spread Index (FXI), in collaboration with the SOFR Academy. The indices are designed to complement the Secured Overnight Financing Rate (SOFR).

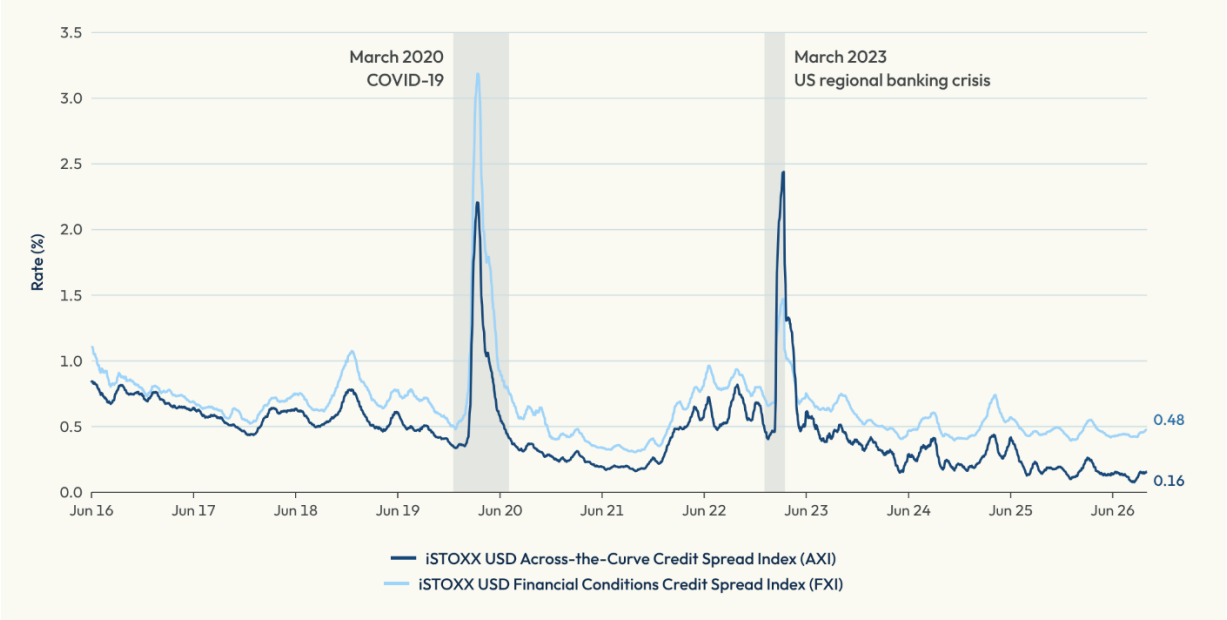

Originally created in 2021 and launched by SOFR Academy in July 2022, USD AXI and FXI address the need for a SOFR-based lending framework that incorporates a credit risk premium. Continuously refined and enhanced since launch, they are transaction-based credit-spread indices designed to reflect prevailing conditions in wholesale funding markets.

The successful shift from LIBOR to SOFR left a structural gap in how the financial system measures credit risk. USD AXI and USD FXI represent transparent spreads to be used alongside — rather than as replacements for — SOFR, preserving the latter as the core risk-free rate.

USD AXI measures the recent cost of wholesale unsecured debt for public US bank holding companies and commercial banks, while USD FXI applies the same methodology to a broader universe that includes non-bank financial institutions and US corporate debt. This enables financial institutions to manage the divergence between risk-free rates and funding conditions.

A credit-sensitive element enables banks to better manage mismatches between their assets and liabilities in times of market stress and supports their ability to extend credit during both good times and bad. USD AXI and USD FXI are based on across-the-curve transactions, providing a broader and more resilient measure of credit conditions without impairing SOFR market liquidity.[1]

Benchmark indices

Key points

Global stock indices ended October lower after a technology sell-off on the month's final session erased earlier gains. Investors worried about slowing earnings growth and the sector's heavy spending on AI.

The STOXX® Global 1800 index shed 0.5% last month in US dollars and including dividends. It rose 1.2% in euros as the common currency weakened 1.7% against the greenback. The benchmark has still gained 11.7% in dollars over 2026, headed for its fourth straight year of double-digit gains.

The EURO STOXX 50® declined 2.1% in euros in October, hurt by chip-related companies. The pan-European STOXX® Europe 600, on the other hand, advanced 2%, helped by gains in pharmaceutical and energy shares.

The STOXX® North America 600 slipped 0.4% in dollars over October and the STOXX® USA 500 fell 1.1%. The STOXX® Asia/Pacific 600 lost 2.9% in dollars.

Investable Market Indices

Key points

The STOXX® AC World shed 1.7% in October, while the STOXX® DM World lost 0.9%, and the STOXX® Emerging Markets declined 7.8% in its worst month since April.

The STOXX Investable Market Indices are a comprehensive global equity index family designed to support modern portfolio construction and benchmarking through a consistent, transparent and scalable framework. The suite captures approximately 99% of the investable equity universe, spanning 23 developed and 23 emerging markets, across large-, mid- and small-cap segments.

A defining feature of the STOXX Investable Market Indices family is its building-block architecture. Indices are constructed at the country level and aggregated into regional and global benchmarks, creating a coherent structure that remains consistent across all layers of the index universe.

World Equity indices

Key points

The STOXX® World AC Universal lost 1.8% last month when measured in dollars and including dividends. The STOXX® Developed World Universal fell 0.9%. The STOXX® Emerging Markets Universal slipped 7.9%.

The STOXX® World Equity indices are a modular suite that allows investors to flexibly build portfolios across a broad and liquid universe of markets in STOXX's largest coverage of securities to date. With turnover and market-capitalization filters in the stock selection to ensure they are tradable and representative, the indices track the performance of large-, mid- and small-cap stocks from a full range of developed and emerging markets, as well as derived sector strategies.

DAX indices

Key points

Germany's DAX family is led by DAX®, the blue-chip benchmark. MDAX® and SDAX® gauge, respectively, the performance of the country's mid and small caps. TecDAX® tracks German technology companies. HDAX® groups all equities that belong to either DAX, MDAX or TecDAX.

The DAX® All Cap, DAX® LargeMid Cap and DAX® MidSmall Cap offer investors one-stop exposure to composite large-, mid- and small-capitalization segments of stocks.

The DAX gained 2.5% last month. SAP, its biggest constituent, climbed 13.8% in the month.

ESG-X indices

Key points

The STOXX® Global 1800 ESG-X dropped 1.3% in October, lagging behind its benchmark.

The STOXX ESG-X indices are versions of traditional, market capitalization-weighted benchmarks that observe standard responsible exclusions. They incorporate basic norm- and product-based exclusion criteria to comply with ESG principles. Companies are excluded based on ISS Sustainability's determination of non-compliance with their Global Standards Screening assessment or if they have a 'severe' corporate risk rating from the sustainability data provider. Companies involved in controversial weapons, small arms, unconventional oil and gas, tobacco, thermal coal (extraction or use for power generation), civilian firearms and military contracting are also removed.

ESG and Sustainability indices

Key points

Among the STOXX ESG and Sustainability indices, the EURO STOXX 50® ESG index underperformed its benchmark by 70 basis points last month. The index applies sustainability exclusionary screens and replaces companies with the lowest ESG scores with higher-rated constituents from the same sector.

The STOXX® Global ESG Select KPIs index, meanwhile, beat the STOXX Global 1800 by 41 basis points over the month. The STOXX ESG Select KPIs indices offer a broad market exposure that is tilted towards companies that score better with respect to a small set of environmental, social and governance key performance indicators.

SRI indices

Key points

The STOXX® Global 1800 SRI index outperformed its benchmark by 119 basis points last month.

The STOXX® SRI (Socially Responsible Investing) indices apply a set of involvement, carbon emission intensity and compliance screens, and additionally track the best ESG performers in each industry group within a selection of STOXX benchmarks.

Net Zero Transition indices

Key points

The ISS STOXX® Developed World Net Zero Transition fell 0.7% in dollars last month.

The ISS STOXX Net Zero Transition indices are a next-generation, optimized set focused on net-zero targets, real-world transition-aligned metrics, and encompassing of all industries included in the parent universe.

The suite is aligned with net-zero frameworks developed by investor groups in the financial sector, and is designed to encourage stewardship and keep the expected tracking error below 1%.

Climate indices – CTBs

Key points

The STOXX® Global 1800 CTB dropped 0.2% last month, beating its benchmark.

The STOXX CTB (Climate Transition Benchmark) indices are based on liquid securities from a selection of STOXX Benchmark indices and follow the EU Climate Transition Benchmark (EU CTB) requirements outlined by the European Commission's Regulation (EU) 2020/1818, supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council on climate benchmarks. Those requirements are designed such that the resulting CTB portfolio is on a decarbonization trajectory.

STOXX has partnered with ISS Sustainability for datasets relating to their Global Standards Screening and controversial weapons, climate-related data such as Scope 1-3 emissions, science-based climate targets and others.

Climate indices – PABs

Key points

The STOXX® Global 1800 PAB also outperformed its benchmark last month.

The STOXX PAB (Paris-Aligned Benchmark) indices are based on liquid securities from a selection of STOXX Benchmark indices and follow the EU Paris-Aligned Benchmark (EU PAB) requirements outlined by the European Commission's Regulation (EU) 2020/1818, supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council on climate benchmarks.

Those requirements are designed such that the resulting PAB portfolio's greenhouse gas (GHG) emissions are aligned with the long-term global warming target of the Paris Climate Agreement. The indices incorporate stringent carbon limitations in the selection of holdings, in line with global commitments to work towards keeping global warming between 1.5^{0}C and 2^{0}C above pre-industrial levels.

As with the CTB indices, STOXX has partnered with ISS Sustainability for exclusions datasets, climate-related data, science-based climate targets and others.

CTB Fixed Income indices

Key points

Most STOXX CTB Fixed Income indices advanced on a total-return basis last month. The indices are based on respective ICE BofA Fixed Income indices, and are a collaboration between STOXX as index administrator and ICE as calculation and dissemination agent, with data from ISS Sustainability. They are constructed to follow the EU CTB requirements as described in the Climate indices section.

The indices exclude companies based on global norms, controversial weapons involvement and tobacco production.

Index construction follows an optimization process that uses the Axioma Portfolio Optimizer software. The indices overweight companies with approved, committed and ambitious carbon reduction targets under the Science Based Targets Initiative (SBTi) and target minimum 'green-to-brown' revenue ratio. The indices are optimized to reduce the turnover to track the performance of the parent indices.

PAB Fixed Income indices

Key points

The STOXX PAB Fixed Income indices also had mostly positive returns last month on a total-return basis.

The indices are also based on respective ICE BofA Fixed Income indices and draw from ICE pricing and calculation services. They are constructed to follow the EU PAB requirements as described in the Climate indices section, and exclude companies based on global norms, product involvement and activities that hinder certain United Nations Sustainable Development Goals (SDGs).

Biodiversity indices

Key points

The ISS STOXX® Developed World Biodiversity shed 2.2% last month. The ISS STOXX® Biodiversity indices allow investors to take a comprehensive approach to the challenges, risks and opportunities from the degradation of our natural ecosystems and growing efforts to protect them.

The indices exclude companies involved in activities that are controversial or cause harm to biodiversity, select securities with less negative impact on ecosystems and those contributing positively to relevant UN Sustainable Development Goals (SDGs). They also reduce the portfolio's carbon emissions.

A key component of the ISS STOXX Biodiversity framework is the Potentially Disappeared Fraction of Species (PDF), an output of ISS Sustainability's Biodiversity Impact Assessment Tool. PDF seeks to measure how corporates affect our natural world by considering a set of environmental pressures on species and habitats across the entire value chain and different geographical locations.

Thematic indices

Key points

The STOXX Thematic indices seek exposure to the long-term economic upside of disruptive global megatrends covering the environment, future technology and socio-demographics.

Seventeen of the 50 Thematic indices featured in this newsletter outperformed the STOXX AC World last month.

The STOXX® Global Pet Care (+9.7%) led returns in the suite last month, while the STOXX® Global Lithium Miners and Producers index (-20.8%) was the laggard for a second consecutive month.

Factor indices

Key points

The STOXX Ax Factor indices offer robust factor definitions and targeted factor exposures, and ensure the tradability of component stocks. They employ the institutionally tested analytics of Axioma Factor Risk Models.

The STOXX Equity Factor indices, meanwhile, are constructed by maximizing the index exposure to a multifactor alpha signal while adhering to a set of constraints intended to closely track their broad equity market parent indices. The multifactor signal is composed of the Momentum, Quality, Value, Low volatility and Low Size factors.

The STOXX® Global Equity Factor index declined 2% in October, paring its gain this year to 13.7%.

Minimum Variance indices

Key points

Minimum variance strategies had strong returns last month.

The STOXX Minimum Variance indices come in two versions. A constrained version has similar exposure to its market-capitalization-weighted benchmark but with lower risk. The unconstrained version, on the other hand, has more freedom to fulfill its minimum variance mandate within the same universe of stocks.

Dividend indices

Key points

Dividend strategies had mixed returns in the month that ended.

The STOXX® Global Select Dividend 100 index tracks companies with sizeable dividends but also applies a quality filter such as a history of stable payments. The STOXX® Global ESG-X Select Dividend 100 index targets the highest-yielding stocks within universes screened for responsible investment criteria.

The STOXX® Global Select 100 EUR index blends increasing dividend yields with low volatility and is calculated in euros. The STOXX® ASEAN Select Dividend 30 index selects the top 30 companies from six ASEAN countries based on dividend yield.

About STOXX
STOXX® and DAX® indices comprise a global and comprehensive family of more than 20,000 strictly rules-based and transparent indices. Best known for the leading European equity indices EURO STOXX 50®, STOXX® Europe 600 and DAX®, the portfolio of index solutions consists of total market, benchmark, blue-chip, sustainability, thematic and factor-based indices covering a complete set of world, regional and country markets.

STOXX and DAX indices are licensed to more than 550 companies around the world for benchmarking purposes and as underlyings for ETFs, futures and options, structured products, and passively managed investment funds.

STOXX Ltd., part of the ISS STOXX group of companies, is the administrator of the STOXX and DAX indices under the European Benchmark Regulation.

The ISS STOXX indices ("Indices") are owned and administered by STOXX Ltd. Environmental, social and governance ratings, scores and other analytical assessments, which can be used as an input to some Indices, are produced by Institutional Shareholder Services Inc. ("ISS"). Both STOXX Ltd. and ISS are wholly-owned subsidiaries of ISS STOXX GmbH. ISS is a Registered Investment Adviser under the Investment Advisers Act of 1940. Except with respect to any applicable products or services from ISS, neither STOXX Ltd. nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and the Indices offered by STOXX Ltd. do not constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and should not be relied on as such.
